JIM

DIVISION OF NOV 21 1983  
OIL, GAS & MINING

Dear Sirs:

You are right Tom, best we can figure we are caught right in the center of too many bureaus & no one place to even start at. As to a planned blueprint of an expected operation how do you know exactly until you start setting up - and then it usually has to be changed.

As to getting samples - how do you do that if you can't run? Also we cannot afford metal analysis by a "State Certified Laboratory" as per Steve McNeals letter of Nov. 2.

We have talked to our banker in Moab, Mr. Nightingale and there is no way he can go a bond and we sure don't have \$12,000.00 cash to put up.

All I know is as the property is worked it would be

put back in a prop manner,  
I thought last months meeting  
was to determine who all  
was responsible for how  
much. Also the big pile of  
rock was brought into the  
discussion - which was a 1978  
working and we had nothing  
to do with that - it was

Giloren Klopferstein & Helen Herod  
& Merrill Herod leased to them.  
So much as we would like  
to work the Poor Bay we  
can see no starting point or  
a finish line. It is a good  
property & this is really a  
shame for it to be sitting idle.  
Maybe we can sell it and  
someone else can do what  
we cannot.

Sincerely

Robert & Shirley Barnes

Even if we could get permitted  
we still couldn't put up bond -  
so why get permitted. Or why  
put up bond - if we could - only  
to be turned down on a permit.
